

MICRO COMPUTER INSTITUTE

Diploma in Computer Applications

Foundation Study Pack - Volume 1
DCA | Duration: 6 Months

Learn - Practise - Apply

A structured bilingual-support handbook for classroom, lab and online learners.

Student use: Read each module, complete the lab activity, save evidence in your portfolio, and discuss doubts with your instructor.

Hindi support (Roman): Har module ko padhen, practical lab activity poori karen, apna work save karen aur doubt teacher se poochhen.

Course Roadmap

This 6 Months programme is organised into 8 learning modules. The sequence may be adjusted by the instructor to match the batch calendar.

No.	Module	Learning focus
1	Computer Fundamentals	Hardware, software, operating systems and file management.
2	Word Processing	Professional letters, reports, tables, styles and mail merge.
3	Spreadsheets	Formulas, functions, charts, sorting and filtering.
4	Presentations	Clear slide design, media and confident delivery.
5	Database Basics	Tables, records, queries, forms and reports.
6	Internet & Email	Research, cloud tools, online services and communication.
7	Accounting Basics	Ledgers, vouchers, inventory and computerized accounting overview.
8	Final Project	Build and present a complete office-document portfolio.

Module 1: Computer Fundamentals

Hardware, software, operating systems and file management.

Key ideas

- Explain the purpose and essential vocabulary of computer fundamentals.
- Demonstrate the standard workflow accurately and safely.
- Choose suitable tools, settings and file formats for the task.
- Check the output, correct errors and save work with a meaningful name.

Lab activity

Create a small working example that demonstrates computer fundamentals. Save the source file and a PDF or screenshot as evidence.

Self-check: Can you repeat the task without step-by-step help and explain why each important step is used?

Module 2: Word Processing

Professional letters, reports, tables, styles and mail merge.

Key ideas

- Explain the purpose and essential vocabulary of word processing.
- Demonstrate the standard workflow accurately and safely.
- Choose suitable tools, settings and file formats for the task.
- Check the output, correct errors and save work with a meaningful name.

Lab activity

Create a small working example that demonstrates word processing. Save the source file and a PDF or screenshot as evidence.

Self-check: Can you repeat the task without step-by-step help and explain why each important step is used?

Module 3: Spreadsheets

Formulas, functions, charts, sorting and filtering.

Key ideas

- Explain the purpose and essential vocabulary of spreadsheets.
- Demonstrate the standard workflow accurately and safely.
- Choose suitable tools, settings and file formats for the task.
- Check the output, correct errors and save work with a meaningful name.

Lab activity

Create a small working example that demonstrates spreadsheets. Save the source file and a PDF or screenshot as evidence.

Self-check: Can you repeat the task without step-by-step help and explain why each important step is used?

Module 4: Presentations

Clear slide design, media and confident delivery.

Key ideas

- Explain the purpose and essential vocabulary of presentations.
- Demonstrate the standard workflow accurately and safely.
- Choose suitable tools, settings and file formats for the task.
- Check the output, correct errors and save work with a meaningful name.

Lab activity

Create a small working example that demonstrates presentations. Save the source file and a PDF or screenshot as evidence.

Self-check: Can you repeat the task without step-by-step help and explain why each important step is used?

Module 5: Database Basics

Tables, records, queries, forms and reports.

Key ideas

- Explain the purpose and essential vocabulary of database basics.
- Demonstrate the standard workflow accurately and safely.
- Choose suitable tools, settings and file formats for the task.
- Check the output, correct errors and save work with a meaningful name.

Lab activity

Create a small working example that demonstrates database basics. Save the source file and a PDF or screenshot as evidence.

Self-check: Can you repeat the task without step-by-step help and explain why each important step is used?

Module 6: Internet & Email

Research, cloud tools, online services and communication.

Key ideas

- Explain the purpose and essential vocabulary of internet & email.
- Demonstrate the standard workflow accurately and safely.
- Choose suitable tools, settings and file formats for the task.
- Check the output, correct errors and save work with a meaningful name.

Lab activity

Create a small working example that demonstrates internet & email. Save the source file and a PDF or screenshot as evidence.

Self-check: Can you repeat the task without step-by-step help and explain why each important step is used?

Module 7: Accounting Basics

Ledgers, vouchers, inventory and computerized accounting overview.

Key ideas

- Explain the purpose and essential vocabulary of accounting basics.
- Demonstrate the standard workflow accurately and safely.
- Choose suitable tools, settings and file formats for the task.
- Check the output, correct errors and save work with a meaningful name.

Lab activity

Create a small working example that demonstrates accounting basics. Save the source file and a PDF or screenshot as evidence.

Self-check: Can you repeat the task without step-by-step help and explain why each important step is used?

Module 8: Final Project

Build and present a complete office-document portfolio.

Key ideas

- Explain the purpose and essential vocabulary of final project.
- Demonstrate the standard workflow accurately and safely.
- Choose suitable tools, settings and file formats for the task.
- Check the output, correct errors and save work with a meaningful name.

Lab activity

Create a small working example that demonstrates final project. Save the source file and a PDF or screenshot as evidence.

Self-check: Can you repeat the task without step-by-step help and explain why each important step is used?

Practical Workbook

Complete these tasks in order. The instructor may adapt names and sample data, but every learner should produce original work.

Practical 1. Create and save a correctly named practice file for Computer Fundamentals. Include a short note describing what you learned.

Practical 2. Create and save a correctly named practice file for Word Processing. Include a short note describing what you learned.

Practical 3. Create and save a correctly named practice file for Spreadsheets. Include a short note describing what you learned.

Practical 4. Create and save a correctly named practice file for Presentations. Include a short note describing what you learned.

Practical 5. Create and save a correctly named practice file for Database Basics. Include a short note describing what you learned.

Practical 6. Create and save a correctly named practice file for Internet & Email. Include a short note describing what you learned.

Portfolio checklist

- Use folder format: CourseCode / StudentName / Module / Activity.
- Keep editable source files plus exported PDF or screenshot.
- Do not copy another student work; mention sources used.
- Back up important work in two locations.

Assignments & Assessment

Assignment 1: Concept Check

Write 300-500 words explaining three important concepts from Computer Fundamentals and Word Processing. Add one real-life example.

Assignment 2: Practical Submission

Complete a combined task using Spreadsheets and Presentations. Submit source file, output and a one-page process note.

Assignment 3: Problem Solving

Identify a realistic institute or small-business problem that can be improved using Diploma in Computer Applications. Propose steps, tools, risks and success measures.

Assignment 4: Final Project

Build a complete project using at least four course modules. Test it, prepare screenshots, and present the result in 5-7 minutes.

Criterion	Weight
Accuracy and completeness	30%
Practical application	30%
Presentation and file organisation	20%
Originality, explanation and safe practice	20%

Revision & Safe Learning Guide

- Review class notes within 24 hours and practise again without watching the demonstration.
- Use legal software and trusted downloads. Scan external drives and downloaded files.
- Never share passwords, OTPs, private documents or student data.
- Verify AI-generated or internet information before using it in assignments.
- Use clear filenames, version numbers and regular backups.
- Ask for help when an error could damage data, equipment or accounts.

Quick viva questions

1. What is the purpose of Computer Fundamentals, and what common mistake should a beginner avoid?
2. What is the purpose of Word Processing, and what common mistake should a beginner avoid?
3. What is the purpose of Spreadsheets, and what common mistake should a beginner avoid?
4. What is the purpose of Presentations, and what common mistake should a beginner avoid?
5. What is the purpose of Database Basics, and what common mistake should a beginner avoid?
6. What is the purpose of Internet & Email, and what common mistake should a beginner avoid?
