

Diploma in Computer Applications

Detailed Chapter Notes & Worked Examples - Volume 2

This pack develops practical understanding through explanations, worked examples, lab tasks and review questions. Complete the matching Foundation Pack first.

Chapter	Topic
1	Professional documents
2	Spreadsheet decisions
3	Database basics
4	Digital office project

Chapter 1: Professional documents

Concept notes

Styles control consistent headings; sections handle different page layouts; tables structure data; mail merge personalizes repeated documents.

Worked example

Create a two-page course brochure with title style, fee table, page footer and enquiry form.

Lab assignment

Produce editable file and accessible PDF.

Review questions

1. Why use styles?
2. When is a table appropriate?
3. What should be checked after PDF export?

Evidence to submit: source file or working output, screenshot/PDF, and a 100-word explanation of decisions and checks.

Chapter 2: Spreadsheet decisions

Concept notes

Formulas transform inputs into results. Validation prevents bad entry; conditional formatting highlights exceptions; charts summarize patterns.

Worked example

Fees table: $\text{Balance} = \text{CourseFee} - \text{Paid}$. Highlight positive balance and summarize course-wise dues with SUMIFS.

Lab assignment

Build a 25-student fee register and due chart.

Review questions

1. What is conditional formatting?
2. Why validate course codes?
3. Which chart fits comparison?

Evidence to submit: source file or working output, screenshot/PDF, and a 100-word explanation of decisions and checks.

Chapter 3: Database basics

Concept notes

Normalize records into focused tables connected by keys. Forms improve entry; queries answer questions; reports format output.

Worked example

Students links to Courses using CourseCode; Payments links to Students using StudentID.

Lab assignment

Design tables and write three query questions before building.

Review questions

1. What is a foreign key?
2. Purpose of a form?
3. Why plan queries?

Evidence to submit: source file or working output, screenshot/PDF, and a 100-word explanation of decisions and checks.

Chapter 4: Digital office project

Concept notes

Combine documents, spreadsheet and data records in a controlled folder with backup and handover note.

Worked example

Create a small institute office pack: admission form, student register, fee report and presentation.

Lab assignment

Complete, test and present the pack.

Review questions

1. What belongs in handover?
2. How test totals?
3. Why retain source files?

Evidence to submit: source file or working output, screenshot/PDF, and a 100-word explanation of decisions and checks.

Final Applied Assignment

Create one original project that combines all four chapters of Diploma in Computer Applications. Use realistic but non-sensitive sample data. Submit planning notes, source files, final output, test evidence and a one-page reflection.

Assessment rubric

Area	Marks
Concept accuracy	25
Working practical output	30
Validation and testing	20
File organisation and presentation	15
Original explanation	10

Student declaration

I confirm that the submitted work is my own practice. I have not included passwords, OTPs, identity documents or confidential student records.
